Selling the city or selling it out?

Mega-events rarely benefit those who need it most and often lead to forced evictions

MEGA EVENTS

by Maria Suurballe

“There is not much to gain and a whole lot to lose.” Kim Schimmel, Associate Professor of the Sociology of Sport, Kent State University, was clear when she spoke at the mega-event session at Play the Game 2007. She believes there is no clear evidence that a mega-event creates any big economic profit.

“Sport mega-events are inherently controversial and problematic. They require massive infrastructural development, massive ideological support and massive funding, and all of this is usually pushed against a forced timeline,” Schimmel said.

Kim Schimmel agrees that some people will benefit from a mega-event, but it rarely tends to be the people who need it the most. On the other hand, when making up the account from hosting these big sports mega-events, she numbers a series of disadvantages: loss of public space, environmental damage and redirecting public money away from much needed social services.

Many forced evictions

A serious cost of hosting a mega-event is the forced evictions that are executed in the name of the progress.

According to the report, “Fair Play for Housing Rights: Mega Events, Olympic Games and Housing Rights”, published by the Centre on Housing Rights and Evictions in 2007, 20 per cent of all forced evictions in 2004 were related to a mega-event.

Often local populations look in vain for the benefits to them when their cities host a mega-event. In Beijing for instance, many people have been displaced and their homes demolished to make room for magnificent Olympic buildings like the Bird’s nest.

As for the Olympic Games, more than two million people have been displaced in the last 20 years, disproportionately affecting minorities such as the homeless, the poor, Roma and African-Americans. Also in Beijing, there is ample evidence of people being forcefully evicted from their homes and forced to live in the street in order to make space for the Olympic Games.

China promised to approve its appalling human rights record, but in some ways, the Games have made things worse. The compensation people are offered for being evicted are pitifully low, and if they resist eviction, they often face brutal and violent intimidation or even being sentenced without any legal proceedings.

“Sport is good for you always”

According to Schimmel, the incitement to host a mega-event is the pursuit of social and economic benefits including benefits for the local population. Critics claim that a substantial part of the residents, mainly the lower class, experiences the downside more than the benefits.

Being critical towards sports mega events is not popular as the inherent beliefs that “Sport is good for you, sport creates better citizens, and sport benefits the community as a whole”, are extremely hard to argue against.

Kim Schimmel recommended that if mega-events are to retain public support and become more democratically accountable achievements, more accurate evaluations should be carried out, and social impact assessments and full public consultation should be practiced before submitting bids.

World Cup 2006 research

It is possible for local communities to benefit economically from hosting a mega-event. Research carried out by economist Markus Kurscheidt from Ruhr-Bochum University in Germany on the FIFA 2006 World Cup shows that a positive legacy can be achieved only through careful and efficient management.

For international associations like the IOC and FIFA, mega-events are big money-spinners. “FIFA made a 2 billion euro turnover on World Cup 2006. When you look at the whole marketing chain of a world cup, it might even be double as a result of licences and so on,” says Kurscheidt.
London Olympics drains grassroots sport budget

The government has no plan for sporting legacy either

by Michael Herborn

When London was awarded the 2012 Olympics at the 2005 Olympic Congress in Singapore, legacy was key to the bid – both regenerative and sporting. Now it appears that grassroots sport will be 560 million pounds worse off for hosting the Olympics.

The figure was presented to Play the Game by James Stibbs of the Central Council for Physical Recreation (CCPR). He said the money will be used instead to fund building projects associated with the Games.

The CCPR, which represents 270 sports bodies from right across the sporting spectrum, has been critical of what it sees as a lack of commitment by the government to creating a sporting legacy.

At the time of the bid’s approval, the budget for preparing for the Games was set at approximately 2.4 billion pounds. Now, that budget has reached a staggering 9.35 billion pounds, taking into account contingency funds, security and tax. This leap in costs for hosting the event is placing pressure on the government and Games organisers to ensure finances are kept in order.

It is in this atmosphere that grassroots sport has to compete for funds with marquee projects such as new stadia and regeneration projects, and as things stand, grassroots sport seems to be losing out.

Legacy questioned

Whether the government seriously entertained creating a lasting sporting legacy is also questionable. At the Olympic congress in Singapore where London got the nod, bid backers, including the British Prime Minister Tony Blair and organising committee chairman Lord Coe, suggested the Games would act as an inspiration for youth around the world to take up sport in the run-up to the London 2012.

However, that legacy never seems to have been considered achievable by experts working behind the scenes on the bid. A government report by the Department for Culture Media and Sport on the legacy from 2002 – three years before London was awarded the Games – found that “there is little evidence that hosting events has a significant influence on participation.” According to the report, “hosting events is not an effective, value for money method of achieving either a sustained increase in mass participation or sustainable international success.”

These findings were backed up by studies by two political think-tanks close to the government, which both suggested a sporting legacy would be hard to achieve through merely hosting the Games.

There is still time

Nonetheless, Stibbs believes that there is hope for a sporting legacy, but only if the government acts now to secure it.

“Whilst the notion of a legacy automatically trickling down is not realistic, that is not to say that it cannot be achieved at all,” says Stibbs.

For Stibbs, a sporting legacy does not just mean a legacy at the elite level. Nor does it mean just a legacy at a general youth level. A sporting legacy, Stibbs and the CCPR argue, should encompass all people, regardless of age, ability or disability and encourage them to take up sport in whatever way they can.

While watching the pole vault might not encourage everyone to take up the sport itself, it might encourage people to get active in other ways, for instance taking up walking or light jogging. Adequate funding and an effective strategy for getting people off the armchair need to be in place in time for the Olympics. Grassroots sports can be boosted by hosting a mega-event but watching sport itself is not enough to make people active.

shows economic legacy

by Michael Herborn

But a good economic result for the organiser does not necessarily mean that host regions also enjoy economic benefits from mega-events. Indeed, much of the research that has been carried out on mega-events has pointed towards a non-existent or negative economic legacy from hosting mega-events for host regions. However, Kurscheidt believes that relying on these accounts does not paint a full and proper picture of economic legacy and mega-events.

“Only a restricted number of events have been studied, most of them were in the USA, and most of them were quite particular. In one region one event could be successful, in another region it isn’t.”

Marketing and technological progress means that the events of the 1980s and 1990s are not the events we have now, and therefore Kurscheidt and his team decided to investigate the economic impact of the FIFA World Cup 2006 held in Germany.

Benefit is peanuts

The team’s findings showed that Germany enjoyed an eight billion euro boost from the tournament. While this is no doubt a large sum, in terms of the German economy the figure is ‘peanuts’ say Kurscheidt. It accounted for under 0.1% of German GDP growth, a figure that is fairly insignificant in economic terms. Still, some benefit is better than none, and Kurscheidt points out that the figures do not take into account the multiplier effect, that could see the boost in GDP in 2006 carried through into 2007 and 2008.

The economic benefit was found to be greatest in towns that have a great location and facilities but a poor reputation, such as the post-industrial city of Dortmund. For these cities, mega-events cannot only provide a short-term boost to visitor numbers and tourism revenues, but also stand to enjoy the greatest benefit from an effective management of the post-tournament economic legacy through place marketing.
